## The Problem:

Work areas with hard surface flooring creating foot and leg fatigue or an accumulation of ice on an entry door landing in residential or commercial areas

## The Solution:

A covering made of natural rubber designed to reduce leg and foot fatigue in work areas, breaks ice build up at entry doors, improving safety and reducing the use of products or equipment that may cause damage to the floor material. Current solutions are not the answer. Shovels and chisels/scrapers damage the flooring. Salt is ineffective at -15°F and carpets of jute or synthetic turf absorb water and freeze, creating hazardous conditions. Employee comfort is increased and leg and foot fatigue reduced.

## Advantages:

- ❖ Flexible in cold weather
- ❖ Placing foot's weight on pad causes cover to sink breaking ice
- ❖ No effort needed to break ice
- ❖ Sure grip grooves reduce risk of falling
- ❖ Flexible design provides padding in work areas to reduce foot and leg fatigue
- ❖ Does not absorb water
- ❖ Easy to maintain, cleans with a broom and mild soap
- ❖ No need for harsh abrasives or chemicals
- ❖ Permanent installation
- ❖ Resistant to ice melting products (salt, potassium/calcium chloride)
- ❖ Resistant to most oil products
- ❖ Less accumulation of ice at entryways

## Easy to Install:

- ❖ Prepare the floor surface by removing any debris.
- ❖ Install the anchors in the pre-drilled holes first starting at the center of the pad and going outward avoiding any pressure to the pad.
- ❖ Avoid anchoring the Flex-Pad with weight on the pad to prevent unnecessary stretching decreasing the pads operating qualities.

\*Flex-Pad must be properly anchored for proper operation and safety. (Anchors not included)

\*\*Flex-Pad is available in 29" x 39" lengths or may be joined together for custom lengths or factory cut to specified lengths
